

Success story – Seismic

Vibro Seismic Stimulation is a technique to enhance oil recovery.

One of the leaders in this technology is Geosvip located in Moscow.

Geosvip manufacture machines for use in the most extreme conditions from -50°C in the Arctic to the heat and humidity of Indonesia.

To ensure continual operation in adverse conditions Star 590-1100 servo valves were selected with a high response characteristic giving 14-30 ton peak force.
