

Success Story – Rail

Case Study

With the help of our Indian distributor, Servo controls, Star have supplied our 650 series valves to the one of the world's leading manufacturers of railway tamping machines at their manufacturing plant at Faridabad (their company HQ are in Austria).

Following the success in India, our distributor in Poland, RDL Hydraulics Sp. z.o.o. has also secured a major contract with PPM-T of Gdansk, a well-established rail infrastructure organisation, to supply Star Valves to replace Moog units on tamping units.

Good service and co-operation were a key to success in this case.
